

RULES OF THE GAME

Version 1.06 - September 2022

STARGATE

— Trading Card Game —

INTRODUCTION

Prepare to step through the Gate! In *Stargate TCG*, you'll guide a team of characters on journeys to other worlds, overcoming obstacles, defeating adversaries, and completing missions along the way. All the fun and adventure of the hit television series is here to enjoy!

As a trading card game, *Stargate TCG* isn't limited to a single deck of cards that never changes. Hundreds of different available cards make for a huge variety of strategies, as you build your own decks from your personal collection.

NOTE

The foundation of this rulebook comes from the booklet found in the *Rise of the Ori* starters. It has been expanded to include the rules introduced in the fan made sets, as well as a few rules clarifications from the game's FAQ and rulings while it was still published (from 2007 to 2008).

CARD TYPES

There are seven types of cards in the game. Four are **HERO CARDS**, used only during your own turn: character, mission, gear, and event. Two are **VILLAIN CARDS**, used only during your opponent's turn: obstacle and adversary.

The last card type is ship; some ships are hero cards, while others are villain cards.

Hero cards have a Stargate icon in the upper left corner, while villain cards have a pyramid icon.

Hero

Villain

CHARACTER

Character cards represent people who work for or with Stargate Command, including people from other planets you encounter on your journeys through the Stargate. There are two subtypes of characters: team and support.

TEAM characters are your primary explorers. You begin each game with exactly four team characters in play in front of you. Each one has a rating in all four of the different skills in the game.

Culture

Science

Combat

Ingenuity

Diagram illustrating the components of a Character Card (Jack O'Neill):

- Point Value & Cost:** Indicated by the number 2 in the top left corner.
- Title:** Indicated by the name **JACK O'NEILL** at the top.
- Subtitle:** Indicated by the text *Witty Explorer* below the title.
- Skills:** Indicated by the four skill icons (Culture, Science, Combat, Ingenuity) and their respective values (0, 1, 3, 3) on the left side.
- Traits:** Indicated by the text **CHARACTER – TEAM – SGC** below the character image.
- Game Text:** Indicated by the text: "Each time Jack O'Neill earns a different glyph, the next mission this turn gets difficulty -1."
- Lore:** Indicated by the text: "We came here in peace. We expect to go in one... piece."
- Collector Info:** Indicated by the text **1R96** in the bottom right corner.

SUPPORT characters assist your team in overcoming obstacles and completing missions. They are played from your hand during the game. A support character usually has a rating in only one or two skills.

Many characters are portrayed in multiple versions, each one a different character card. Though each version shares the same title, they have different subtitles.

MISSION

Mission cards represent the places your characters travel to through the Stargate. They will need to use one of the four skills to complete each mission. You'll often need two or more characters, working together, to succeed in meeting a mission's requirements.

In each game, you will have exactly 12 missions.

The experience on a mission is one of the ways you can win the game. The glyph is earned by one of the characters who successfully completes it, sometimes increasing his abilities. There are six different glyphs:

The Abydos set introduces the Point of Origin  glyph, but it is only used on six cards from that set (four missions and two team characters).

GEAR

Gear cards represent the equipment used by your characters. Some are conventional military items such as weapons, while others are special devices used by the SGC, such as the MALP. Still other gear represents alien technology.

EVENT

Event cards represent critical moments in your adventures. When you play an event, you carry out its effects and then place it in your discard pile.

OBSTACLE

Obstacle cards represent the unexpected trials and challenges a team faces as it travels through the galaxy. An obstacle could be anything from a strange disease to hostile natives to governmental red tape back on Earth.

ADVERSARY

Adversary cards represent individuals that oppose a team, such as Goa'uld System Lords, Priors of the Ori, and other major enemies.

Some adversaries are portrayed in multiple versions, each one a different adversary card. Though each version shares the same title, they have different subtitles. Some adversaries do not even have subtitles, making them non-unique.

Note that while adversaries have some apparent similarities to characters, they are *not* characters.

SHIP

Ship cards represent the spaceships used in your adventures, from small fighters to great warships. Some ships are hero cards, while others are villain cards. The aspects of a ship card are the same in either case.

Some ship cards represent unique vessels like the Prometheus, while others represent a general type of ship, like a Death Glider. Unique ships have a subtitle.

STARTING A GAME

Each player places his four team characters face up in a row in front of him. He takes his 12 missions, shuffles them, and sets them to one side as his mission pile. He then shuffles his remaining cards to form his deck.

Each player totals the point values of his four team characters. This number becomes his opponent's **VICTORY TOTAL**.

If you have the highest victory total, you become the first player. (In case of a tie, determine the first player randomly.) Your opponent chooses one of your team characters and stops it. (You will be unable to make use of that character during your first turn. Stopping is described in full later; see **HERO PLAYER ACTIONS**.)

Paul's four team characters have point values of 2, 3, 4, and 5, making Jason's victory total 14. Jason's team characters have point values of 3, 3, 3, and 4, making Paul's victory total 13. Jason's victory total is higher, so he becomes the first player. Paul then stops one of Jason's team characters.

Each player then draws eight cards from his deck to create his opening hand. After looking at your opening hand, you may decide to shuffle it back into your deck, then draw the same number of cards for a new opening hand. You may do this only once. (The first player decides whether to do this before the second player.)

As you play the game, you may encounter cards that contradict rules described in this rulebook. The game text of cards always supersedes the rules.

TURN SEQUENCE

Players alternate taking turns. One player's turn consists of each of the following phases, in order.

1) Power Phase

2) Mission Phase

- a) Performing Actions
- b) Resolving the Current Mission
- c) Deciding to Continue

3) Debrief Phase

When it is your turn, you are the **HERO PLAYER**; all villain cards you have in play are ignored by both players. During your opponent's turn, you are the **VILLAIN PLAYER**; all hero cards you have in play are ignored by both players.

POWER PHASE (1)

In this first phase of each turn, players receive an amount of power they will have available during the turn. Each player receives 3 power, plus 1 power for each glyph beneath the hero player's characters.

It's Jason's turn, and there are two glyphs beneath his characters (from completing two missions on previous turns). Jason and his opponent Paul each receive 5 power to spend during this turn.

Power can't be saved from one turn to the next; anything you don't spend by the end of the turn is lost.

You may find it helpful to use glass beads, dice, a pencil and paper, or some other means to track the power you receive, and how you spend it as the turn unfolds.

MISSION PHASE (2)

When you are the hero player, you take the top card of your mission pile and play it face up between you and your opponent. This is the current mission, the first destination for your characters during this turn. (They may later travel to other destinations, so you should leave space to the right of the mission.)

Jason turns over the top card of his mission pile, Supply Raid, and plays it face up in front of him.

The mission phase is separated into three steps: **PERFORMING ACTIONS**, **RESOLVING THE CURRENT MISSION**, and **DECIDING TO CONTINUE**.

PERFORMING ACTIONS (2A)

In this step, players alternate back and forth, each having the chance to perform an action, beginning with the hero player. Each player may perform any number of actions during the mission phase (even none), but must perform them one at a time, allowing his opponent a chance to perform an action in between.

You may "pass" when it is your chance to perform an action. Passing once does not prevent you from performing an action later on. If both players pass consecutively, proceed to "Resolving the Current Mission."

Note: **triggered effects** (defined in the glossary) are not actions, and do not count as the effect's controlling player's chance to perform an action. They briefly interrupt the normal back and forth flow of actions.

HERO PLAYER ACTIONS

When you are the hero player, there are three kinds of actions you can perform: **PLAY A CARD**, **ASSIGN A CHARACTER OR SHIP**, and **BOOST A CHARACTER OR SHIP**.

PLAY A CARD. You may play an **event**, **support character**, **gear**, or **ship** (hero only, not villain) from your hand. You must pay the power cost listed on the card, subtracting it from your total available power for the turn. If you don't have enough power to pay this cost, you can't play the card.

When you play an **event**, carry out its game text immediately, then place the card in your discard pile.

When you play a **support character**, **gear**, or **ship**, place the card face up in front of you, in a row behind your team characters.

You can't play a character if you already have a character (team or support) that has the same title in play, even if the two have different subtitles. The same is true of any ship that has a subtitle. However, there is no such restriction for gear, or for a ship that doesn't have a subtitle.

By default, all your characters, gear, and ships are **ready**, available for you to use in performing other actions described later.

As a result of a player's actions, a ready card can become **stopped**. A stopped card is no longer ready, and is unavailable for use through the rest of the turn. As your cards become stopped, place them in a column to the left of the current mission. A card that is already stopped can't be stopped again.

If one of your support characters, gear, or ships is destroyed, place it in your discard pile.

ASSIGN A CHARACTER OR SHIP. You may assign a ready character or ship (hero only, not villain) to the current mission. Pick up the character or ship and place it in a column below your side the mission. (It is then no longer ready, it becomes assigned instead.)

You can assign a **team** character to the current mission even if his rating in the skill it requires is 0; you can assign a **support** character to the mission only if he has some rating in the required skill.

To complete the current mission during the next step, the total skills contributed by your assigned characters must be equal to or greater than its difficulty. Assigning characters is your means to ensure success.

Ships can be assigned to any mission, regardless of the skill it requires.

During the next step, your ships may use their firepower in a ship battle against your opponent's ship. More firepower will give you the edge in such a battle.

BOOST A CHARACTER OR SHIP. If you have a character card in your hand that has the same title as a character you have assigned to the current mission (even if it has a different subtitle), you may discard it from your hand. The assigned character gets skills +1 until the end of the current mission.

Similarly, you may discard a ship card that has the same title as one of your assigned ships (even if it has a different subtitle). The assigned ship gets firepower +1 until the end of the current mission.

You may boost the same character or ship more than once during the same mission.

VILLAIN PLAYER ACTIONS

When you are the villain player, there are five kinds of actions you can perform: **PLAY AN OBSTACLE**, **PLAY AN ADVERSARY OR SHIP**, **ASSIGN AN ADVERSARY OR SHIP**, **BOOST AN ADVERSARY OR SHIP**, and **PLAY A COMPLICATION**.

PLAY AN OBSTACLE. You may play an obstacle card from your hand. You must pay the power cost listed on the card, subtracting it from your total available power for the turn. If you don't have enough power to pay this cost, you can't play the card.

Each obstacle has a difficulty rating in one or more of the four skills. (Sometimes, this rating is 0.) You can't play an obstacle unless one of these matches the current mission's required skill.

When you play an obstacle, place it in a column below your side of the mission. Each obstacle adds its difficulty to that of the current mission. If an obstacle has a rating in more than one skill, pay attention only to the difficulty for the skill matching the current mission.

PLAY AN ADVERSARY OR SHIP. You may play an adversary or ship (villain only, not hero) from your hand. As with obstacles, you must pay the power cost listed on the card. It is not necessary for you to match any of an adversary's difficulty ratings to the one required by the current mission. Ships have no difficulty ratings, and can be played regardless of the current mission's requirements.

When you play an adversary or ship, place it face up in front of you, in a row separate from your hero cards. You can't play an adversary if you already have an adversary that has the same title in play, even if the two have different subtitles. The same is true of any ship that has a subtitle. There is no such restriction for a ship that doesn't have a subtitle.

Like the hero player's characters, gear, and ships, your adversaries and ships are **ready** by default, and may become **stopped** as players perform actions. Place any stopped cards in a column to the side of the current mission (opposite the hero player's stopped cards).

If one of your adversaries or ships is destroyed, place it in your discard pile.

ASSIGN AN ADVERSARY OR SHIP. You may assign a ready adversary or ship (villain only, not hero) to the current mission. (It is then no longer ready, it becomes assigned instead.)

You can assign an adversary only if he has some rating in the skill required by the current mission. He adds that difficulty rating to the mission's difficulty. You can assign an adversary to a mission only if you don't already have another assigned there.

Ships can be assigned to any mission, regardless of the skill it requires. You may assign a ship even if you already have another assigned there.

BOOST AN ADVERSARY OR SHIP. If you have an adversary card in your hand that has the same title as an adversary you have assigned to the current mission (even if it has a different subtitle), you may discard it from your hand. The assigned adversary gets difficulty +1 until the end of the current mission.

Similarly, you may discard a ship card that has the same title as one of your assigned ships (even if it has a different subtitle). The assigned ship gets firepower +1 until the end of the current mission.

You may boost the same adversary or ship more than once during the same mission.

PLAY A COMPLICATION. You may pay power to take any card from your hand (hero or villain) and place it face down at the current mission. The card becomes a complication, and adds 1 to the difficulty of the mission.

The cost to play a complication is 1 power, plus 1 power for each other complication already at the current mission. If you don't have enough power to pay this cost, you can't play the complication.

The first complication you play at a mission costs 1 power. A second would cost 2 power, a third 3 power, and so forth.

If a complication is somehow destroyed after it is played, it no longer affects the cost of subsequent complications.

ACTIVATED ABILITIES

As the hero player or villain player, you may also use an activated ability on one of your cards in play when it is your turn to perform an action. An activated ability is any paragraph of game text that contains a “—” symbol.

The part before that symbol is the cost to use that activated ability. If you are unable to pay this cost, you can't use the activated ability. The cost isn't necessarily an amount of power. It may include one or more glyphs (described later; see **Earn a Glyph**).

The part after that symbol is the effects you carry out after paying the cost.

You may use the same activated ability more than once, as separate actions, provided you can pay its cost each time.

Example of Performing Actions

Jason is now attempting his Supply Raid mission. It requires 4 Combat, so he assigns Teal'c (who has 3 Combat) to it.

Paul passes.

Jason plays Olaf from his hand, costing 3 of the 5 power he can spend this turn.

Paul passes again.

Jason assigns Olaf, who has 2 Combat, to the mission. His assigned characters now have a total Combat rating of 5, enough to succeed.

Paul now plays an obstacle from his hand, Salish Spirits, costing 2 of the 5 power he can spend this turn. It adds 2 Combat to the mission difficulty, raising it to 6.

Jason boosts Olaf's skills, discarding a copy of Olaf. Olaf now has 3 Combat, and Jason has a total Combat of 6.

Paul plays a complication, taking a card from hand and placing it face down at the mission. This costs 1 power (leaving him 2 for the rest of the turn), and raises the mission's difficulty by 1. It now requires 7 Combat.

Jason assigns Rak'nor, who has 2 Combat. He now has more than enough to succeed.

Paul passes, and Jason then passes behind him. It is time to resolve the mission.

RESOLVING THE CURRENT MISSION (2B)

Once both players pass consecutively in the previous step, resolve the current mission.

SHIP BATTLE

If any ship is assigned, by any player, a ship battle occurs. Each player totals the **firepower** of all his assigned ships. If your total is higher than your opponent's, you achieve **victory**. If only one player has any assigned ships, that player achieves victory. In the case of a tie, neither player achieves victory.

When you achieve victory, if your opponent has any ships assigned, you may choose one of those ships and **incapacitate** it (described in the *glossary*).

Your cards may have game text that is triggered when you achieve victory. Such text is labeled with the Victory keyword. You use only this text on assigned cards. It is not optional unless specified (using the word "may"). If you have more than one assigned card with the victory keyword, use them in the order of your choice.

DETERMINE SUCCESS OR FAILURE

Once ship battle is over (or skipped, if no ships are assigned), you determine the success or failure of the mission. If the total skills contributed by the assigned characters are equal to or greater than the difficulty of the mission (as increased by the obstacles, adversary, and complications there), the hero player succeeds. If not, he fails.

Jason has a total of 8 Combat assigned to Supply Raid. The mission's difficulty, including the obstacle and the complication Paul played there, is 7. Jason succeeds at the mission.

A mission with no characters assigned to it is a failure, even if the mission's difficulty has been reduced to 0.

USE SUCCESS AND FAILURE GAME TEXT

Next, players use any game text that is triggered by the resolving of a mission. Such text is labeled either with the **SUCCESS** or **FAILURE** keyword, and is used depending on whether the mission was a success or a failure. This game text is not optional unless specified (using the word "may"). Players use only the game text on the current mission and on the cards assigned there.

The hero player first uses any game text on his hero cards (in the order of his choice), then the villain player uses any game text on his villain cards (in the order of his choice).

*The Supply Raid mission was a success, so Jason now uses its game text: “**Success:** Your opponent loses 2 power.” Had he failed, Paul would have used the game text on Salish Spirits: “**Failure:** Destroy a support character.” Paul would have destroyed Olaf.*

Some game text is labeled “**Success** or **Failure**”. Use this as if it were two pieces of identical text, one labeled **Success** and the other labeled **Failure**.

Whether the mission was a success or a failure, all characters and ships that are still assigned there now become stopped. If an assigned character changed state, such as becoming ready, after success or failure was determined (for instance, as a result of a mission’s success or failure text), then he is no longer assigned at that point, and is not stopped.

REVIVE OR SCORE ADVERSARIES

Once all appropriate game text has been used, if the villain player assigned an adversary to the current mission, *and he is still assigned now*, he must decide if he wants to **revive** (always an option) or **score** (only if the mission failed) that adversary.

REVIVE. Each adversary has a revive cost (separate from his power cost). To revive one of your adversaries, you must take a number of cards equal to that revive cost from the top of your deck, then place those cards in your discard pile. Remove the adversary from the current mission. He becomes stopped. You may revive an adversary whether the mission was a success or a failure. If you don’t have enough cards remaining in your deck to pay the revive cost, you can’t revive the adversary.

SCORE. To score one of your adversaries, the hero player must have failed the current mission. Remove your adversary from the current mission and place him in your villain score pile. He is no longer in play. You may later play another copy of that same adversary (and you may score that copy as well).

There is normally only one adversary assigned at each mission, but should there be more than one, you can score only one adversary at each failed mission.

If you decide to neither revive nor score an assigned adversary, destroy him.

You don’t revive, score, or destroy any adversaries that aren’t assigned to the current mission (even if they were assigned there earlier this mission).

Once the villain player has chosen to revive or score (or neither), he destroys all obstacles and complications at the current mission.

EARN A GLYPH

If the mission was a failure, proceed to the next step.

However, if the mission was a success, it becomes a glyph which one of the hero player's characters now earns. The hero player takes the glyph and places it beneath one of the characters that was assigned there at the resolving of the mission. It is placed so the right side of the card, showing the experience, is visible to both players. You should then check to see if hero player has won the game (as described later).

Jason takes the completed Supply Raid mission and places it underneath Teal'c, one of the characters he assigned there.

Some characters have game text that is triggered each time they earn a glyph, and this would be used now. (There are also cards that can move a glyph from one character to another; in those cases, the second character is not earning the glyph.)

Glyphs may be earned either by team or support characters, as you choose. However, when a support character who has any glyphs is destroyed, you must place those glyphs face down on the bottom of your mission pile (in the order of your choice).

Team characters may have activated abilities that include glyphs as part of their cost. You pay the cost to use these (during the Performing Actions step) by simply having that glyph beneath the character; you do not lose the glyph in doing so.

Harold Maybourne's game text reads: "⌘, Stop Harold Maybourne – All other team characters get skills +1 until the end of the current mission." To pay the cost, you stop him when he has a ⌘ glyph beneath him.

Remember that an activated ability always contains the "—" symbol. Other characters have game text that instead uses a glyph followed by a colon. This kind of game text is not used by you as an action, but is continuous as long as the character has the specified glyph beneath him. The game text applies only once, even if the character has more than one of the specified glyph.

Part of Svetlana Markov's game text reads: "▶: Svetlana Markov gets 🧠 +1." As long as she has a ▶ glyph beneath her, she has 1 more Ingenuity. She doesn't get 2 more Ingenuity if she has two ▶ glyphs beneath her.

DECIDING TO CONTINUE (2c)

The current mission has now ended. Its game text is now ignored. The hero player must then decide if he wants to continue to another mission this turn.

As the hero player, you may now play a new mission. To do this, you must pay 1 power for each failed mission this turn. The villain player *gains* power equal to this amount.

If you have failed no missions this turn, it costs you no power to play a new mission. But if you have failed two missions this turn, you must pay 2 power to play another. Your opponent would also gain 2 power.

If you decide to play a new mission, take the top card of your mission pile and play it face up between you and your opponent (to the right of any failed missions from earlier in the turn). It is now the current mission. Return to the first step of the mission phase, Performing Actions.

Any power already spent by players is not recovered. Any cards already stopped remain stopped. Players must deal with the new mission using only the resources they have remaining.

Jason decides to attempt another mission after Supply Raid. Teal'c, Olaf, and Rak'nor remain stopped from resolving that mission, and can't be used to assist with subsequent missions. Jason now turns over the top card of his mission pile and plays it.

Jason and Paul now repeat the same process of attempting this new mission. Jason has spent 3 power, and has only 2 remaining. Paul also has 2 power.

The hero player may decide to play a new mission even if he has no ready characters he could assign there later during the Performing Actions step.

If the hero player decides not to play a new mission (or is unable to because he can't pay the costs, or because his mission pile is empty), proceed to the Debrief Phase.

DEBRIEF PHASE (3)

This phase occurs after all missions have been resolved and the hero player has chosen not to continue.

If you are the hero player, all your stopped cards become ready; return them to the appropriate rows of your play area. The villain player also readies all his stopped cards.

Then, you take all the failed missions left behind this turn and place them face down on the bottom of your mission pile (in the order of your choice).

Jason failed in his second mission attempt, and decided not to continue. He now readies all his characters, then puts that failed mission face down on the bottom of his mission pile.

After this, each player “refills” his hand to its regular, eight card size. If you have fewer than eight cards, draw until you have reached eight. If you have more, you must choose and discard cards until you have only eight. If you have exactly eight, do nothing.

The current hero player’s turn is now over. The next player then takes his turn, becoming the hero player.

Jason played no other cards during his second mission attempt, so he now draws two cards to return his hand to eight cards.

Paul played three cards (the obstacle and the complication, plus another obstacle at the second mission Jason attempted), and now draws three cards to return his hand to its full size. Jason’s turn is now over, and Paul begins his.

If at any time a player draws the last card remaining in his deck, the game does not end. Instead, that player continues to play using the cards he has in play and in his hand.

WINNING THE GAME

There are three ways to win the game, two as the hero player and one as the villain player. A game ends immediately, when a player meets any victory condition:

You win when your characters have a total of seven glyphs beneath them.

You win when your total experience (on the glyphs beneath your characters, and on any of your other cards) is equal to or greater than your victory total.

You win when the total cost of the cards in your villain score pile is equal to or greater than your victory total.

Paul began the game with four team characters whose point values were 5, 4, 3, and 3, setting Jason’s victory total at 15. Jason can win the game as the hero player either by having seven glyphs, or 15 or more experience. He may win as the villain player by having a total cost of 15 or more on cards in his villain score pile.

BUILDING A DECK

In a trading card game, much of the fun comes from creating your own strategy by choosing the cards you'll use in your deck. The Stargate TCG decks you build must follow these rules:

You must include exactly 4 different team characters to play at the start of the game.

You must include exactly 12 missions for your mission pile. Your required skill mix must consist of exactly 3 📖 missions, 3 🧪 missions, 3 🚫 missions, and 3 🧠 missions. You may use any mix of difficulties, experience, and glyphs.

The rest of your deck must include at least 20 hero cards and at least 20 villain cards. Any cards you include in excess of these 40 may be any mix of hero or villain cards. There is no maximum size to this portion of your deck.

You can't include more than three copies of the same card title in your deck (even if they have different subtitles).

You can't include any missions in your deck beyond the 12 in your mission pile.

You may include in your deck one or two copies of any team character you start the game with. There is no way to play a team character from your hand during the game, but you will be able to use these copies to perform the "boost a character" action, or as complications when you are the villain player.

THREE OR MORE PLAYERS

Stargate TCG is primarily intended for two players, but you may play a version with more players using a few simple adjustments.

Each player receives his victory total from the total point value of the team characters used by the player on his left. The player with the highest victory total becomes the first player. (In case of a tie, determine the first player randomly from all players tied for highest victory total.)

The first player has one team character stopped at the start of the game, chosen by the player on his left. The second player also has one team character stopped at the start of the game, but one he chooses himself. All other players begin the game normally (as the second player in a two-player game does).

During the game, when a player is the hero player, the player to his left is the villain player. All other players are inactive players during that turn. None of an inactive player's cards, hero or villain, are in play. An inactive player receives no power to use during a turn.

GLOSSARY

This glossary provides further clarification of some concepts introduced earlier in these rules. It also explains some new concepts.

ACTION

During the Mission Phase, players alternate back and forth, each having the chance to act (i.e. perform an action), beginning with the hero player. Each player may perform any number of actions during the mission phase (even none), but must perform them one at a time, allowing his opponent a chance to perform an action in between.

You may “pass” when it is your chance to perform an action. Passing once does not prevent you from performing an action later on.

Note: **Triggered effects** (see below) are not actions, and do not count as the effect’s controlling player’s chance to perform an action. They briefly interrupt the normal back and forth flow of actions.

AMBUSH [NEW RULE INTRODUCED IN DESTINY]

Some obstacles have the **ambush** keyword, followed by one or more skill icons in parentheses and an ambush text. Until the obstacle becomes **PREPARED**, none of this has any effect. Ambush obstacles usually become *prepared* as a result of their **failure** or **victory** text, but some might also become prepared as they are played. When you are instructed to “*prepare this ambush*,” the obstacle is removed from the current mission’s obstacle row and placed face up alongside your ready adversaries, where it is now considered prepared.

Each time a mission is played, the villain player checks whether any of his prepared obstacles has a skill icon matching the mission’s. Any ambush obstacle that does is then triggered: its ambush text is resolved, after which it’s immediately destroyed. If multiple ambush texts are triggered at the same time, the villain player decides in which order they will be resolved. If an ambush obstacle should have been triggered, but it wasn’t for any reason, it is destroyed without any effect as soon as the mistake is discovered.

Ambush obstacles, once prepared, are never considered to be at any mission. This means prepared ambush obstacles are not destroyed during missions’ resolution, and they do not contribute any difficulty to missions (ignore their difficulty ratings). Finally, the hero player can’t target them, unless his action specifically refers to a prepared obstacle.

If an ambush obstacle at a mission was blocking one or more characters, they are unblocked as soon as the obstacle becomes prepared.

If for any reason a prepared ambush obstacle is assigned (moved back into the obstacle row), it’s no longer prepared: it behaves like a regular obstacle, contributes difficulty, and its ambush text becomes inactive until it becomes prepared again.

ASSIGNED

Assigned characters, adversaries, and ships can become stopped. (Assigned characters and ships can also become incapacitated.) If this happens, the card is no longer assigned, and no longer contributes skills to the current mission.

AT NO COST

See **Cost**, below.

BLOCK

Some game text can cause a character or adversary to become blocked from one or more missions. A character or adversary who is blocked can't become assigned, even if he is ready. (However, if he is already assigned when he becomes blocked, he remains assigned.)

Blocked characters and adversaries who are still ready can be used in other ways; they just can't be assigned to a mission.

Antarctic Rescue's game text reads: "When you play this mission, your opponent chooses a team character. He is blocked." He blocks your Samantha Carter, whose game text reads: "►, Stop Samantha Carter — Turn an obstacle at the current mission face down." You can't assign Samantha Carter to the mission, but you could still use her activated ability to affect an obstacle there.

If a card in play that blocked a character or adversary is placed in a discard pile, that character or adversary immediately becomes unblocked. (Events are never in play.)

Blocking a card is sometimes a cost of using an activated ability. To pay such a cost, the card must be ready and not already blocked.

P90's game text reads: "Stop this gear, block a team character from the current mission — Obstacles cost power +1 to play until the end of the current mission." The team character you block to pay this cost must be ready and not already blocked.

BLOCKADE

Some villain cards have this keyword, letting you take the top card of your opponent's mission pile, to place face up beneath the card. A single card can blockade only one mission at a time; if you use it to blockade another, place the older mission face down on the bottom of its owner's mission pile.

If the blockading card is destroyed, also return the mission face down on the bottom of its owner's mission pile.

BOUNTY TOKEN [NEW RULE INTRODUCED IN ALLIANCES]

Some cards can place a **bounty token** on a character. A character can't have more than one such token on him. While he has a bounty token, his owner must pay 1 power to assign him. His owner also has the following ability: "Pay 2 power — Destroy a bounty token."

CAN'T

If one piece of game text says you "can't" do something that a different piece of game text would normally allow, the "can't" takes precedence.

*Part of Harlan's game text reads: "Stop Harlan — Play a support character at normal cost, even if you already control a character who has the same title."
Fall of Earth's game text reads: "You can't play support characters." While Fall of Earth is the current mission, you can't use Harlan's game text to play a support character.*

COLLECTOR INFO

Each card has a collector information code in its bottom right corner. The first number stands for the set it was printed in: 1 for SG-1 (292 cards), 2 for System Lords (292 cards), 3 for Rise of the Ori (240 cards), 4 for Atlantis (60 cards), 5 for Unending (78 cards), 6 for Missions (72 cards), 7 for Alliances (78 cards), 8 for Abydos (42 cards), 9 for Destiny (78 cards), 10 for Symbiosis (90 cards), and 11 for Children of the Gods (144 cards). The letter in the middle indicates rarity (C: common, U: uncommon, R: rare, UR: ultra rare, S: found only in starter decks, P: promo, T: tournament reward, and F: fanmade). The last number is the card's number in the set.

COMPLICATION

Each complication played at a mission gives it difficulty +1. The villain player can play any card from his hand (even hero cards), face down, at the cost of 1 power, plus 1 power per complication already there (i.e. the first costs 1 power, the second costs 2 power, and so on). Some game text allows you to turn an obstacle face down, changing it into a complication. Any ongoing effects of that obstacle's game text immediately end.

Samantha Carter's game text reads: "►, Stop Samantha Carter — Turn an obstacle at the current mission face down." If you use this to turn an obstacle face down that was blocking one of your characters, that character becomes unblocked.

COST

Cost is a term that can have different meanings in the game, depending on context. Most of the time, it refers to the number printed in the top left corner of all non-mission cards. That is the cost to pay to play the card, paid with power.

Every card with the phrase “costs power +/-X to play” is referring to that cost, and nothing else. This would not reduce the cost of an activated ability, for instance, unless specifically referring to one.

Costs can also appear in activated abilities, in cards’ game text, and in triggered effects.

In activated abilities, the cost is everything listed before the “—” symbol. If even a part of that cost (which can include power to pay, but also other things like discarding or destroying a card) can’t be paid, then the activated ability can’t be used.

Baal, Charming Villain’s game text reads: “Stop Baal, pay 3 power — Incapacitate a stopped team character.” To play this activated ability, you must be able to stop Baal, and have at least 3 power remaining, as those are the cost to use it.

In game text, it usually takes the form “to do A, do B.” In that case, the cost is the second clause. If you can’t do B, then you can’t do A.

Aris Boch’s game text reads: “To assign Aris Boch, pay 2 power and discard a card.” You must be able to pay the entire cost (paying 2 power and discarding a card) to be able to assign Aris Boch.

Tight Rein’s game text reads: “To assign a character, your opponent stops another character.” Here the cost is to stop a character to be able to assign another.

In triggered effects, the cost is usually found just before the phrase “If you do...”

Joe Faxon’s success text reads: “You may destroy Joe Faxon. If you do, ready a character.” The cost is destroying Joe Faxon. It must be paid if you want to ready another character.

Healing Device’s game text reads: “Each time a support character would be destroyed, you may stop this gear and pay 2 power. If you do, stop that character instead.” Here the cost is to stop the gear and pay 2 power. It must be paid in its entirety, or the character’s destruction will not be prevented.

If a cost includes incapacitating, stopping, or readying a card, it can’t be paid with a card that is already incapacitated, stopped, or ready, respectively.

If a cost includes blocking a card, it can’t be paid with a card that is not ready and/or is already blocked.

When you play a card **AT NO COST**, this means the power cost printed in the top left corner of the card is reduced to 0. Any other costs, including optional power costs you could pay when you play the card, must still be paid in full. Playing a complication at no cost reduces the power cost to 0, but a card from the villain player’s hand must still be placed face down at the mission. If an

ability can be played at no cost, it only reduces the power cost to 0: other costs (such as stopping or discarding cards) must still be paid as normal.

Jamala's game text reads: "When you play Jamala, you may stop him and pay 3 power. If you do, ready a team character." If you get to play Jamala at no cost, he costs 0 power instead of 2, but if you want to ready a team character, you still have to pay the optional cost of 3 power and stop him.

If you get to play a complication at no cost while there are already two complications at the mission, it costs 0 power instead of 3, but you still must choose a card in hand to place face down at the mission.

Also see **Effect**, below.

COUNTER

Some cards utilize counters to keep track of a variable number. You can use beads, pennies, dice, or any other means to represent these counters. Unlike tokens, counters never have any associated rules. They simply are a practical way to represent a number that can change as the game progresses.

Some counters have names, some others don't, but it doesn't matter one way or another, as the only card that will ever need to refer to the counters is the card creating them.

Also see **Token**, below.

DISCARD

Whenever you are instructed to discard one or more cards, unless specified otherwise, the cards are taken from your hand, and you choose which ones to place in your discard pile.

DISCARD PILE

You may look through any player's discard pile at any time. The order of your discard pile is irrelevant. Whenever you take a card from your discard pile, you must show that card to your opponent.

DOMINION [UPDATED RULE IN ALLIANCES]

When you score an adversary, you may also score one villain card with this keyword at that mission. You may score only one such card per mission.

DRAIN X [NEW RULE INTRODUCED IN ATLANTIS]

This keyword can appear in the game text of any card. It is always followed by a number. When a card instructs you to **drain X**, you must take a number of cards equal to X from the top of your deck and place them into your discard pile. If your deck has fewer than X cards left in it, discard them all.

Even though reviving an adversary is mechanically identical to draining a number of cards equal to his revive cost, it is not considered to be a drain action.

EFFECT

Once all **costs** have been paid (if any), whatever a card instructs a player to do next is the effect. Players *must attempt* to do as much of the effect as they can, but unless stated otherwise, being unable to perform parts of an effect does not cancel the rest of the effects.

Nightwalkers' failure text reads: "Stop all support characters." It doesn't matter if some or even all support characters are already stopped. You apply this effect to all support characters that are not already stopped: those who are already stopped just ignore it.

Because players must attempt to do as much of the effect as possible, whenever they have to change a card's state (ready, stopped, blocked, or incapacitated) they must choose valid targets that are not already in that state (see **State**, below).

Part of Amonet's card text reads: "Each time you assign Amonet, your opponent may incapacitate a team character." Assuming your opponent chooses to incapacitate one of his team characters, he wouldn't be able to target a team character that is already incapacitated. He would need to select a ready, assigned, or even stopped character (the most likely choice) who may or may not also be blocked.

Telekinetic Mutants' game text reads: "When you play this obstacle, your opponent stops a character." If your opponent controls some characters who are already stopped, and some that aren't, he must choose to apply this effect to one of the characters who are not already stopped.

The phrasing of the game text matters.

Team Compromised's game text reads: "When you play this obstacle, your opponent chooses a ready team character. He is blocked." Your opponent must choose a ready team character, that's all that is required of him. The blocking comes after. So he can choose any ready character, even one that's already blocked. If that card had been phrased differently, such as "your opponent blocks a ready team character," then he wouldn't have been able to choose a character that was already blocked.

If there are no valid targets for an effect, it does nothing.

Adam Banks' success text reads: "Destroy a villain ship." If your opponent does not control any villain ship when this triggered ability resolves, it has no effect.

GRIT [NEW RULE INTRODUCED IN DESTINY]

Grit is a keyword found only on characters, though other cards may refer to it.

The hero player gets the following triggered ability: “Once each mission, when you assign a character with grit, you may pay 1 power and discard a card. If you do, the current mission gets difficulty -1.” You can do this only once each mission, even if you assign other characters with grit later during the same mission.

INCAPACITATED

A ready, stopped, or assigned character or ship can become incapacitated instead. When this happens, turn it face down.

You do *not* ready an incapacitated card during the debrief phase (it stays face down). Instead, at the *start of your next turn*, flip your incapacitated characters or ships face up and then immediately stop them. Your opponent does the same with his villain ships at that time.

No card can ready an incapacitated card (unless it specifically says it works on an incapacitated card).

*Jason has just failed a mission, and Paul played an obstacle there with this game text: “**Failure:** Incapacitate a team character.”*

Paul chooses to turn Jason’s Daniel Jackson character face down.

Later, in Jason’s debrief phase, he does not ready Daniel Jackson. Instead, at the start of Jason’s next turn, he readies and immediately stops Daniel Jackson. During that turn’s debrief phase, Daniel Jackson would finally be ready.

An incapacitated card can’t be used to pay costs involving stopping or blocking that card, and it can’t be targeted by any effect that would stop or block it. Its game text is ignored.

You may still refer to its title and traits. A card that would look for the traits on all characters would still see the incapacitated character’s traits, for instance.

In the rare occurrence where a support character is incapacitated, he still counts as being in play, meaning you can’t play another card with the same title. Effects can destroy an incapacitated support character.

The glyphs and experience beneath an incapacitated character still count towards winning the game, and can still be moved.

A card that is already incapacitated can’t be incapacitated again for any reason.

KEYWORD

A keyword is a boldfaced word that appears in the game text of a card, and has special rules associated with it. Examples of keywords include **VICTORY**, **SUCCESS** and **FAILURE** (explained earlier, under “Resolving the Current Mission”), and others such as **DOMINION**, **WITHDRAW**, **OUTLAW**, **VASSAL**, or **AMBUSH**, explained elsewhere in this glossary.

LORE

Most cards have lore, italicized text that appears in a separate paragraph following the game text. Lore never affects the game in any way; it's there to provide information about the Stargate universe.

LORE TOKEN [NEW RULE INTRODUCED IN SYMBIOSIS]

Some cards can place a **lore token** on a character. A character can only have one such token on him. When the token is placed, the player who created it must announce which of the six original glyphs (the  glyph can't be chosen) it represents for as long as it is in play. Once chosen, it can't be changed. Destroy any other lore token the character had when placing a new one. A lore token gives a character all the benefits of having one copy of the chosen glyph on him.

Even though they represent glyphs, lore tokens are not glyphs. As such, they can't be moved or targeted by effects that target glyphs, and they do not count towards winning the game with seven glyphs.

Finally, when the lore token is placed, the character receiving it didn't actually *earn* the chosen glyph, so it does not trigger any ability linked to earning a glyph.

NEGATIVE NUMBERS

There are no negative numbers in the game. When multiple modifications apply to the same number (such as amounts of a skill being taken away), if the final result is less than 0, that number becomes 0. If *another* modification is then applied, recalculate the result from the beginning.

OBSTACLE

Some game text refers to obstacles by skill type. It works as long as the obstacle has some rating in the skill, even if that is not the skill required by the current mission.

Part of Zat Gun's game text reads: "Choose a  obstacle." You can choose an obstacle played at a  mission, as long as that obstacle has a  rating.

OUTLAW [NEW RULE INTRODUCED IN ALLIANCES]

This keyword appears only on villain cards. The villain player gets the following triggered ability: "Each time you play a card with **outlaw**, you may pay 1 power. If you do, play a complication at no cost immediately after the card with outlaw enters play." This can, and often will, trigger an effect on the card with outlaw that was just played. Note that the player still has to choose a card in hand to place face down at the mission.

POINT VALUE

The cost of a team character is also his point value. While in your team, the point value of each team character is added to determine your opponent's victory total. A team character's point value may never be increased beyond 6.

While in your deck (to be used for the boost action), that number is their cost. You will never be able to play them from your deck by paying that cost, but other cards may refer to it.

PROMOTION TOKEN

Some hero cards have this keyword, letting you place a glass bead or other marker on a team character. That character gets point value +1 for each **promotion token** he has, to a maximum value of 6. This changes your opponent's victory total during the game.

Your Zukhov has a point value of 5. If he gets a promotion token, his point value becomes 6. Your opponent then needs 1 more experience (or 1 more total cost in his villain score pile) to win the game. Additional promotion tokens on Zukhov won't raise his point value above 6.

PURGE [NEW RULE INTRODUCED IN UNENDING]

This word can appear in the game text of any card. Whenever an effect instructs you to purge one or more cards, you remove the targeted cards from the game. They do not go to the discard pile: they are set aside, unable to have any effect on the game. You can't retrieve a purged card during the current game, unless an effect or ability specifically targets a purged card. Purged cards are shuffled back into their owner's deck only after the current game is over.

READY

While cards are readied normally during the debrief phase, some game text can ready an assigned, stopped, or incapacitated card at other times. Return the readied card to the appropriate row of your play area. If it was assigned to the current mission, it is no longer assigned, and no longer contributes skills to the current mission.

SKILLS

If a card affects the "skills" of a character or adversary without specifically naming any of the four skills, it affects only those skills that character or adversary already has.

Part of Bra'tac's game text reads: "or 1: While Bra'tac is ready, each Jaffa support character gets skills +1." Artok is a Jaffa support character who has 2 Combat, and no ratings in any other skill. Bra'tac would give Artok +1 Combat, but no Culture, Science, or Ingenuity.

A rating of 0 is not the same as having no rating; a 0 can be modified by cards that affect “skills.”

Seasoned Travelers’ game text reads: “Choose a team character to get skills +1 until the end of the current mission for each glyph he has.” This card could give 1 🍷 to Teal’c, who normally has 0 🍷.

A card that gives a skill by name can do so to a character or adversary that doesn’t already have it.

Part of Young Jack’s game text reads: “While an SGC team character is assigned, Young Jack gets 🍷 +1, 🌀 +1, and 🧠 +1.” Because Science and Combat are specified by name, he gains them even though he normally has a rating only in Ingenuity.

If a card modifies a character’s skills “until the end of the current mission,” the modification stays in effect even if the card leaves play or becomes incapacitated.

Harold Maybourne’s game text reads: “🔪, Stop Harold Maybourne – All other team characters get skills +1 until the end of the current mission.” If he is incapacitated after using this game text, the other team characters still have skills +1.

Hathor’s game text reads: “Each time you assign Hathor, each character already assigned gets skills -1 until the end of the current mission.” If you assign Hathor, and she is later destroyed, the character who were assigned before her still have skills -1.

STATES

Most cards in play exist in one of four states: **ready**, **assigned**, **stopped**, or **incapacitated**. A card can only be in one of these states at a time. No effect can give a card a state that it is already in: if it would be the result of a card’s ability, that part of the ability has no effect, and if it is a cost to activate an ability, that cost can’t be paid and the ability can’t be activated.

Characters and ships can exist in any of the four states. Adversaries can be ready, assigned, or stopped. Gear can be ready or stopped. Events (which are never in play) and missions don’t exist in any of the four states.

A card can be **blocked** while in any one of the four states, and changing state while blocked does not remove the blocked status.

STOPPED

You may use a card’s game text even while it is stopped, unless it says otherwise.

Martouf’s game text reads: “Each other character who has at least one glyph matching one of Martouf’s gets skills +1.” Other characters can still get skills +1 even while Martouf is stopped.

Transport Rings' game text reads: "Stop this gear, pay 3 power — Ready a character." This is an activated ability, and stopping the gear is part of its cost. You can't stop a stopped card, so you can't use this while the Transport Rings is stopped.

TOKEN

The game uses a variety of tokens, which were first introduced in the *Rise of the Ori* set with **promotion** tokens. Subsequent sets introduced **wound**, **bounty**, and **lore** tokens. You may use glass beads or any other kind of markers to represent them, as long as you can differentiate between them.

Unlike **COUNTERS**, tokens always have rules associated with them. You can find these rules in their specific entries in this glossary.

TRAITS

All cards (other than missions) list one or more traits in an area separate from their game text. There are two groups of traits: **CARD TYPES** and **AFFILIATIONS**.

Card types are:

Adversary (villain)

Character (hero)

Event (hero)

Gear (hero)

Obstacle (villain)

Ship (hero and villain)

Support (hero)

Team (hero)

Affiliations are all the other traits that are not card types, and include:

Ancient (hero)

Asgard (hero)

Atlantis (hero)

Destiny (hero)

Disease (villain)

Goa'uld (villain)

Jaffa (hero and villain)

NID (hero)

Ori (villain)

Political (villain)

Replicator (villain)

Russian (hero)

SGC (hero)

Tok'ra (hero)

Wraith (villain)

Effects in the game are often applied selectively only to cards that have a specific trait.

Imhotep's game text reads: "When you play Imhotep, choose one: Stop a Jaffa team character; or stop all Jaffa support characters." When you play him, you may stop a card that has the Jaffa, team, and character traits, or stop all cards that have the Jaffa, support, and character traits.

TRIGGERED EFFECTS

Some cards have game text that is triggered by specific things happening in the game. The trigger is always described first, followed by an explanation of the effects that occur. Triggered effects always begin with the words "when," "each time," or "at."

Brief Candle's game text reads: "When you play this mission, stop a character." Its effect triggers once, when you play the mission.

Ishta's game text reads: "Each time Ishta earns a glyph she already has, you may destroy an adversary." Her effect triggers whenever she earns a glyph she already has.

Part of Henry Hayes' game text reads: "At the end of your power phase, gain 1 power." His effect triggers during each of your power phases.

Multiple triggered effects on different cards can sometimes be triggered by the same thing. In these cases, resolve the effects one at a time, in an order chosen by the hero player.

Triggered effects are not an action (as described in "Performing actions"). They happen as soon as they are triggered, momentarily interrupting the normal flow of alternating opportunity to act between players. Once all triggered effects are resolved, the turn resumes with the player whose turn it should be to act, regardless of which player controlled the triggered effect.

Mike, the villain player, plays an obstacle at a Combat mission where David, the hero player, has Yuri assigned with another Russian character. Yuri's game text reads: "Each time an obstacle is played while Yuri is assigned with another Russian character, you may destroy him. If you do, destroy that obstacle." Yuri's effect is triggered, and David must immediately resolve it. David decides to destroy Yuri, and as a result, Mike's obstacle is destroyed. It was Mike who acted last (by playing the obstacle), so it's now David's turn to act.

UNIQUE / NON-UNIQUE

A card is considered **unique** if it has a subtitle, meaning you can have only one copy of a card with its title in play at a time (even if they have different subtitles). Conversely, a card with no subtitle is **non-unique**, and you can play it even if you already have another card with the same title in play. You can play a unique card even if your opponent has a card with the same title in play.

VASSAL [NEW RULE INTRODUCED IN ALLIANCES]

Vassal is a keyword found only on Adversaries, and is always written as **[affiliation] vassal**. An adversary with this keyword ignores and is ignored by other adversaries with the specified affiliation trait whenever a player checks whether he can assign him or any of his other adversaries.

This means that one non-vassal adversary and one vassal adversary with the specified affiliation trait can be assigned to the same mission, in any order. If the vassal adversary is also *non-unique*, up to three of them can be assigned with a non-vassal adversary.

Mike controls one Nirrti adversary and two Baal Clone adversaries (which have the Goa'uld vassal keyword and are non-unique). Because Nirrti has the Goa'uld trait, Mike can assign her and one or both of the two Baal Clones with her, in any order.

VICTORY TOTAL

Your victory total is the sum of the point value of all your opponent's team characters. This is the number you must reach or surpass, with either the total of your collected experience, or the total cost of cards in your villain score pile, to win the game.

WITHDRAW X

This keyword appears on some obstacles. It is always followed by a number. An obstacle with **withdraw** has the activated ability: "Destroy this obstacle – Gain X power," with X defined by the number.

WOUND TOKEN

See **wounds**, below.

WOUNDS [NEW RULE INTRODUCED IN ATLANTIS]

Whenever an action wounds a card, the player who played it creates a **wound token** and places it on the targeted card. Wound tokens can only be placed on characters and adversaries. There is no limit to the number of wound tokens these cards can have on them.

If a player is instructed to **wound** characters twice or more by an action, the player creating the wound tokens distributes them to characters who can legally receive them as he sees fit: they can all be placed on a single character, or spread among multiple characters in any combination. Some cards give more specific instructions (i.e. on "different characters" or on "assigned characters") which supercede these rules as usual.

A card is considered to be **wounded** if it has at least one wound token on it. A wounded card gets skills -1 for each wound token on it. The owner of the wounded card can perform the following action: "Drain X, discard a card — Destroy X wound token on a wounded card" (see **Drain X** above) for as long as he controls at least one wounded card.

Hive Keeper's game text reads: "Each time you assign Hive Keeper, you may wound assigned characters twice." When you assign this adversary, you may create 2 wound tokens that you then place on assigned characters. You can either place them both on the same assigned character, or one on each of two assigned characters.

Evan Lorne, a support character, has a base $\oplus$ skill of 2. He receives two wound tokens. His $\oplus$ is now 0 (2 -2). He gets a third wound token, but his $\oplus$ stays 0, because there are no negative numbers in the game. He then gets skills +1, but he still has a total $\oplus$ of 0 (2 -3 +1). Then his owner Mike drains 3 cards from the top of his deck, and discards 1 card from his hand, to destroy 3 wound tokens on Evan Lorne. Evan Lorne now has 3 $\oplus$ (2 +1).

If a wounded character becomes **incapacitated**, destroy all wound tokens on him. Incapacitated characters cannot be wounded.

TURN SEQUENCE

1) POWER PHASE

All incapacitated characters (hero) and ships (hero and villain) are turned face up and stopped.

Both players get power equal to 3 + number of glyphs the hero players has.

2) MISSION PHASE

A) PERFORMING ACTIONS

Play the mission at the top of the hero's mission pile.

Then players take turn performing actions, starting with the hero player.

B) RESOLVING THE CURRENT MISSION

i) SHIP BATTLE

The player with highest firepower total achieves **Victory**.

ii) DETERMINE SUCCESS OR FAILURE

If total skill is equal to or greater than total difficulty: **Success**.

Otherwise: **Failure**.

iii) USE SUCCESS AND FAILURE GAME TEXT

After that, all remaining assigned characters are stopped.

iv) REVIVE OR SCORE ADVERSARIES

Scoring an assigned adversary is only an option if the mission failed.

All revived adversaries are stopped. Then all assigned adversaries that haven't been revived, obstacles, and complications are destroyed.

If the villain score pile total of the villain player is equal to or greater than his victory total, he wins the game.

v) EARN A GLYPH

Earning a glyph is only an option if the mission succeeded. Skip otherwise.

If the hero player now has 7 glyphs, or the total of his earned experience is equal to or greater than his victory total, he wins the game.

c) DECIDING TO CONTINUE

To continue, the hero player pays 1 power for each failed mission this turn.

The villain player gains that much power.

3) DEBRIEF PHASE

All stopped cards become ready.

Both players refill their hands to 8 cards, or discard down to 8 cards.

The villain player and hero player exchange roles.

A new turn begins for the hero player.
